

TouchCon Platform Project

2020. 06. 01

Digital Asset TouchCon (TOC) Information

[Purpose of TouchCon project]

TouchCon is a project that pursues the scalability of the TouchCon and the advertising market by connecting smart advertisers who want to use online and offline advertising services and consumers who want to use them through the blockchain by applying Smart QR Code (SQC) content. . SQC is an abbreviation of Smart QR Code and is designed to receive various rewards including touch coins at random as two-dimensional QR code contents that can be posted or digitized in online and offline advertisements. In particular, 'TouchCon App' allows consumers to access digital assets more intimately, and advertisers can implement more efficient advertising policies through big data analysis according to consumer scans.

The Touch Token (TOC) is used as a transaction method for the reward points of consumers who subscribe to the TouchCon platform and will be used as a key currency to activate the TouchCon ecosystem.

[Smart QR Code. SQC]

Smart QR Code is a content designed to receive random rewards by electronically entering various digital assets including touch tokens into a 2D QR code. Consumers download the 'TouchCon App' and scan the SQC. At this time, it is TouchCon's unique advertisement compensation content that can be randomly rewarded for various rewards entered in the code.

[TAA of TouchCon Advertisers]

TouchCon can activate the TouchCon ecosystem by recruiting and cooperating with advertisers who will use Smart QR Code for advertisements, and these federations are called TAA. TAA is targeted at all businesses and individuals who wish to advertise in a variety of industries and industries. Advertisers can use SQC for various advertisements of their company, and after the scan reward, they can promote more effective advertising policies through big data analysis according to consumption behavior. TouchCon is building a more progressive TAA partnership not only with Indonesia, but also with overseas companies and companies such as Korea and Japan.

[Patent for SQC compensation system]

The Smart Qal Code (SQC) reward system is the first random reward method for digital assets that are patented in Korea. SQC patent is an electronic compensation method for digital assets using 2D QR code, and is currently pursuing additional patent registration in Indonesia and other countries around the world.

*Korean Patent Registration: [Patent No. 10-2035419](#)

[TouchCon Foundation & Team]

TouchCon Foundation is located in Jakarta, Indonesia, and touchcon platform technology development and project execution are being conducted in cooperation with Indonesian and Korean partners and the Foundation.
